PERSONAL PROJECT

Calculator - Using HTML, CSS & JavaScript

- Using HTML to create content for the calculator like Creating boxes, input fields, buttons, etc.
- We were using CSS for managing the content of HTML Like the content color, width, height, font size, Padding, margin, etc.
- In the Calculator, there are different buttons and all These buttons have different functions. For example, The (+) button performs the addition operation and The (–) button performs the subtraction, and it is Possible to assign these operations to these buttons Using JavaScript.
